

Activity Summary Form

Name of Activity:

“Diabetes: The Numbers (w/Michigan Data),” prepared by DPAC and MDCH
(adapted from the National Diabetes Education Program).

Tools Needed:

- PowerPoint Presentation
- Meeting Room
- Computer
- Overhead Projector
- Participant Evaluation Forms

Suggested Time:

25 minutes for presentation

5 minutes question/answer period

Suggested Audience:

The audience for this presentation can be the following: health care providers (doctors, nurses, physician assistants, medical assistants, etc), social workers, health educators, public health workers, and members of the general public seeking health-related knowledge.

Objective:

To increase knowledge about the prevalence and burden of diabetes in the United States and Michigan, as well as understanding of the impact and cost of complications associated with diabetes.

Learning Objectives for participants:

At the end of this presentation, those attending the presentation will:

- Recognize diabetes as an important public health issue for the United States and Michigan
- Understand how age and racial/ethnic groups are affected by diabetes
- Be aware of the prevalence of diabetes and prediabetes in the United States and Michigan
- Name the major complications of diabetes and how they can be prevented or controlled
